What is your site about and what was the motivation to create it?

My site is about my resume and portfolio of graphic design and artwork. My motivation to create it was to be able to have a simple and straightforward platform to display my work and experience, that was not just a one page resume.

How is your site structured/ what are the different pages

My site was structured with 5 different pages. The homepage opens with just the heading and a photo of myself, and clicking on the photo reveals the "about me" information. The second and third pages are two different parts of my resume. The fourth page is a gallery of my graphic design and artwork with labels of what they are. The last pages is a list of my contact information and media.

What Javascript/Jquery libraries are being used here and would you recommend using it for future projects

I used mouseover, mouseleave, the button function, and show/hide.

What are your future project plans/next steps to take for your web project if any?

I would like to change the look of my website in the future. I want to change the header so that when you click my name it takes you to the homepage.
